

CLAIMS:

1. A system of securely controlling a wireless mobile communication device, comprising:

at least one domain, each domain including an asset of the wireless mobile communication device; and

a domain controller configured to receive a request to perform an operation affecting at least one of the assets, to determine whether the request originated with an entity that has a trust relationship with the domain that includes the at least one affected asset, and to permit completion of the operation where the request originated with an entity that has a trust relationship with the domain that includes the at least one affected asset.

2. The system of claim 1, further comprising a key store for storing cryptographic keys associated with the domain that includes the at least one affected asset, wherein the domain controller is configured to determine whether the request originated with an entity that has a trust relationship with the domain using the cryptographic keys.

3. The system of claim 1, wherein the domain controller is configured to determine whether the request originated with an entity that has a trust relationship with the domain that includes the at least one affected asset by determining whether the domain that includes the at least one affected asset also includes the entity.

4. The system of claim 1, wherein the at least one domain further includes a software application.

5. The system of claim 4, wherein the at least one domain comprises a plurality of domains, and wherein the wireless mobile communication device further comprises a super user software application that has a trust relationship with more than one of the plurality of domains.

6. The system of claim 5, wherein each of the more than one of the plurality of
